

University of Warsaw

Department of Economics

- Team including
 - Mikolaj Czajkowski,
 - Tomasz Zylicz,
 - Marek Giergiczny,
 - Anna Bartczak, and others
- Extensive experience with non-market valuation, and econometrics of modelling individual or public preferences
 - Including in forest settings, e.g. with respect to:
 - Conservation
 - Recreation
 - Multi-function
 - We have published in *Ecological Economics*, *Journal of Environmental Economics and Management*, *Environmental and Resource Economics*, *Journal of Forest Economics*, *Forest Policy and Economics* and many other top journals of the field

University of Warsaw

Department of Economics

- Our expertise can be used for the following points of the call:
 - A. Innovative sustainable management of multifunctional forests including:
 - 5. ... methodologies for assessing the economic, social and environmental values of forest products and services in regional and national scales; deducting trade-offs in management
 - 6. ...non-wood forest products
 - For example, we could be interested to investigate the trade-offs between various uses of the forest, such as:
 - recreation vs. timber extraction
 - recreation vs. “naturalness” of a forest
 - optimal spatial management of forests with respect to their recreational value
