Outreach seminar for international collaboration

## “INNOVATIVE FOREST-BASED BIOECONOMY FOR THE FUTURE”

October 8<sup>th</sup> – 9<sup>th</sup> 2019; C3 – Science Cultural Centre, Buenos Aires, Argentina

### INFORMATION FOR ARRIVAL

#### TRANSPORT TO/FROM AIRPORT

Ministro Pistarini International Airport (Spanish: *Aeropuerto Internacional Ministro Pistarini*), known as Ezeiza International Airport, is located 22 kilometres (14 mi) south-southwest from Buenos Aires.

To reach Buenos Aires city, we recommend contacting **Manuel Tienda Leon TRANSFER EXPRESS**: <http://www.tiendaleon.com.ar/home/>. It offers a reliable bus which leaves every 30 minutes from Ezeiza Airport to downtown Buenos Aires.

If you prefer to take a **TAXI**, we suggest any of these:

- <http://www.aa2000.com.ar/taxisyremises.aspx>
- <http://www.traslada.com.ar/en/>
- <http://remisbelltour.com/>

**INDIVIDUAL TRANSFER** Traslada: [www.traslada.com.ar](http://www.traslada.com.ar); cae@traslada.com.ar; (54 11) 4131-5111

- EZEIZA - CABA = \$1,584 (ARS PESO) + Freeway tax + Parking
- CABA - EZEIZA = \$1,584 (ARS PESO) + Freeway tax

**RIDE-HAILING APPS:** Ride-hailing apps such as Uber are a popular option for visitors to Buenos Aires. They are often more cost efficient and also remove some of the uncertainty or confusion that language issues can cause using a normal taxi. Uber is generally about 30% cheaper than taking a taxi, except during peak times, such as holidays that cause surge pricing. Unlike most taxis, Uber can be paid with a (non-Argentine) credit card, users know the cost of the trip beforehand and the app provides information about the driver, such as their name and customer rating. Nonetheless, please take into consideration that taxi drivers may become aggressive if they catch on that the car is an Uber (especially in the airport). In this sense, if you do call Uber, act like the driver is an old friend and get in the front seat.

#### ENERGY

Electric voltage is 220 volts, 50 cycles (220v 50Hz). Appliances or electric devices designed for 110V need a transformer. Most travel appliances like notebook computers have an auto volt (110V-240V) transformer that will adapt to Argentinean electricity.

#### MONEY EXCHANGE RATE

53,00 AR PESO = 1 EURO
